

The **Education Team** has completed its educational series until the fall. At our first meeting in the fall, we will discuss continuing these programs or switching focus. Michael Douglas from the Maine Primitive Skills School did a terrific talk on edible, medicinal plants and their responses to climate change on May 17. Attendance was not what we hoped. David Solmitz and Bonnie met to discuss more detailed plans for David's educational project that he is working on. The next meeting will be in the fall.
