

**Education & Community Outreach:** We have put Steve Kahl's Energy talk on the back burner as Steve is otherwise occupied for the foreseeable future. We are disappointed, but there is nothing to be done about it at the moment. Noted that there is a real estate group in the area that we can contact if this project gets traction in the future.

Linda suggested contacting the winners of the Source sustainability awards. Her idea was to connect with one winner at KVCC as a link to SMMC and to use the WindowDressers award as part of our publicity for that project.

Bill provided an update on his Nutritarian diet group. The group is getting bigger, and people are paying attention. The ultimate goal is to reduce health care costs statewide. Bonnie suggested an adult ed class would be an ideal opportunity to present this information. Bill plans to promote this through Maine UU Social Action Network.

ECO is waiting before spending time on the Window Dressers Manual until further notice from Laura Seton through Clough and the Energy Team.

We reviewed "Destruction of Nature as Dangerous as Climate Change, Scientists Warn" by Jonathan Watts. Elery sent this article to us. It is recommended reading for SMMC. <https://www.theguardian.com/environment/2018/mar/23/destruction-of-nature-as-dangerous-as-climate-change-scientists-warn>

Bonnie provided an update on CCL. She also told us that Alder Fuller is about to launch educational programs about systems science online. The site is under construction and is not yet public.

The next Education Team meeting will be Thursday, May 3 at 9:00 in the IT Training Room.
